

Vitalii Komarovskiy

Lead Software Engineer

Valencia, Spain | Ready to relocate · +34 66 55 33 068 · komarovskiy.v@gmail.com · [LinkedIn](#)

Languages: Ukrainian (Native), English (Advanced), Spanish (Elementary)

SUMMARY

Lead Software Engineer with 15+ years delivering scalable backend and cloud-native systems in Python.

Led a stream of 3 senior engineers: roadmap alignment, mentoring/onboarding, code reviews, task prioritization, and cross-team stakeholder coordination.

Built observability from zero to end-to-end coverage (Datadog + Terraform): 10+ dashboards, 10+ monitors; Python (FastAPI/Flask, asyncio), distributed systems, RFC/PoC-to-production, incident debugging.

SKILLS

Lead skills: Stream leadership, roadmap alignment, mentoring/onboarding, code reviews, stakeholder communication, requirements gathering, technical decision-making (RFC/PoC), engineering standards.

Backend: Python (advanced), FastAPI/Flask/Django, asyncio, REST APIs, performance tuning, profiling/debugging.

AI: LLM integration (OpenAI API), LangChain, LangGraph, RAG, pgvector, prompt engineering, evaluation/observability (LangSmith).

Distributed systems: Microservices, event-driven design, real-time ingestion pipelines, fault isolation, idempotency, retries/backpressure, scalability patterns.

Other: AWS (ECS, Lambda, S3), Azure (Durable Functions, API Management), Docker, Terraform, CI/CD, Datadog, PostgreSQL/ClickHouse/Redis/RabbitMQ/Kafka.

Additional (hands-on practice): Neo4j.

EXPERIENCE

AI & LLM Research Project (Personal Development / Self-Study)

September 2025 - Present, Remote

- Built an AI calendar assistant for natural-language scheduling and availability analysis across multiple calendars.
- Implemented agentic workflows with LangGraph/LangChain and OpenAI APIs; added RAG + memory for contextual decisions.
- Backend in Python (FastAPI) with PostgreSQL (+pgvector) and Redis; used LangSmith + a CLI harness for evaluation and rapid local testing.
- Not deployed to production (learning project after a career break).

Tech Stack: Python, FastAPI, LangChain, LangGraph, LangSmith, OpenAI API, PostgreSQL (+pgvector), Redis, Docker, CI/CD, RAG.

Crystal Intelligence (Crypto Domain) — Senior Software Engineer (Stream Lead)

December 2021 – August 2025, Remote

- Led execution for a backend stream (team of 3 Senior Python developers), with roadmap planning aligned with the Core Lead; owned delivery via mentoring, code reviews, and prioritization.
- Built observability from zero to end-to-end coverage using Datadog; delivered 10+ dashboards and 10+ monitors (infrastructure/host + applications + custom metrics + alerting), with requirements collected from team leads and managed via Terraform (IaC).
- Authored RFCs / PoCs and shipped platform upgrades: multi-instance + regional UserManagement for data residency, and migration from session auth to JWT to reduce coupling and enable scalability.
- Delivered core "Monitor" capabilities (continuous wallet monitoring + configurable risk alerts) and

investigator/compliance features (block list interactions report).

- PostgreSQL at scale: migrated a ~20M-row table to a partitioned schema with planned user-facing impact under 5 minutes during business hours; implemented CSV export up to 1M rows via streaming + cursor-based queries with multiple sorting options.
- Built real-time blockchain parsers for ADA/TRX/XRD; contributed to production ingestion using Kafka; for TRX/XRD designed a two-stage ingestion flow (buffering/staging table with raw data to normalization into standard schema).

Tech Stack: Python, Flask, PostgreSQL, ClickHouse, Redis, RabbitMQ, Kafka, Docker, AWS (ECS, S3, Lambda), Datadog, Terraform, GitHub CI/CD, asyncio.

EPAM Systems (Insurtech) / Senior Python Developer (Feature Owner)

September 2020 - December 2021, Kyiv, Ukraine

- Owned a core feature (D&F bot) on Azure Durable Functions, accountable for delivery and ongoing improvements.
- Led execution with 1 Intermediate developer: mentored on domain + stack, ran code reviews, and prioritized/assigned tasks.
- Migrated core business logic to Azure (Durable Functions, API Gateways/serverless workflows) to modernize architecture and improve scalability.
- Led end-to-end data migration from MySQL to MS SQL Server, ensuring data integrity, query optimization, and minimal downtime.

Tech Stack: Python, Azure Durable Functions, Azure API Management, MS SQL Server, MySQL, Docker, CI/CD, Git.

Python Developer → Lead Software Engineer — Career Growth (2010–2020)

Multiple Projects – ArtDriver, ICM Consulting, MMU Business School, DataArt, SoftServe, Diceus, Freelance, Wedding Spot Inc. | 2010 – 2020

- Designed, developed, and maintained backend systems using Python, Django, and Flask for clients across web, education, and enterprise domains.
- Architected scalable backend solutions and RESTful APIs, improving performance, reliability, and developer productivity.
- Delivered end-to-end backend projects as a freelancer, managing requirements, design, development, and deployment independently.
- Optimized production systems at Wedding Spot, Inc., improving response times, reducing downtime, and ensuring code quality and maintainability.
- Mentored junior developers and contributed to establishing best practices for code review, testing, and CI/CD pipelines.

Tech Stack: Python, Django, Flask, asyncio/TornadoWeb, Celery, PostgreSQL, MySQL, MongoDB, Redis, REST APIs, Docker, CI/CD, Git, Agile/Scrum, TypeScript/JavaScript/ReactJS
